Other css libraries such as – **Bootstrap**   **Material-UI**

## Projects

### 1. Fakestore App

- This Website is Store app which lets you checkout various products that are being fetched by an **API**. There are different categories just below the heading where you can select from categories which are also being fetched from an **API**.
- The challenge I faced in this project was making the website **Responsive** for different screen sizes and Handling the api calls.
- **OnClick**ing the checkout button of a particular product the user can see the full details of the product to make that function was another challenge that helped me learn something new.

### 2. Fooder App

- This website is a Food based website where you can check various types of food
- The challenges I faced in this project was designing and managing the card component that open OnClicking on a food type.
- Making the website with Great **Ui/Ux** and **Responsive** was something challengeing for me.

### 3. Gym App

- This is a Gym Website with a registration page which stores all the data to a **Google firebase Database**.
- Making this website with good ui/ux and Responsive was challengeing for me.
