## Projects

---

**Portfolio | HTML, CSS, JS, Vercel | Live Link | Project-Code**

- Website for a timeline of my education and work experience, as well as a list of my skills and areas of expertise.
- I have also included links to my social media profiles. In addition to my resume, my website features a selection of projects that I have completed in the past, showcasing my abilities and the range of my experience.

**E-commerce | HTML, CSS, JS, React | Live Link | Project-Code**

- This project was build to learn basics of JavaScript, React, API, carousel, CSS
- Main reason of this project was understand process of making Navbar for learning concept of routing, searchbar, footer to make it reusable. further use them in a website with similar requirement.

**Cooling load estimation | HTML, CSS, JS, | Project-Code**

- Main purpose of becoming a web developer was to use my mechanical domain knowledge to good use. This project takes different parameter like volume of room, location, different desirable temperature, capacity of people, heat from different appliances, thermal coefficient, by giving all this details the users get a accurate amount of air condition tonnages required for room
- Backend developing of this project is still in process.
