Experience

TSS Consultancy Pvt Ltd, Mumbai

Software Engineer
June 2021 - Present

- Developed and worked with entire KYC generation workflow right from Data Ingestion, Data Validation, CKYC Workflow Integration, Image integration, Data Validation before CKYC upload, KYC sbmission, Response merging and SMS,Email Notification of KYC related details features.
- Generated and worked with existing Reports which gives the summary details of records present on database using **SQL Server, ASP.NET, .NET Core and EF Core**.
- Worked with SCRUM team and participated in SCRUM events like **Sprint Planning, PBR and Retro and Review**.
- Developed a custom feature and a **RESTFUL** web service dedicately which was responsible to fetch Aadhar number based on Aadhar data Vault reference number from ADV.
- Collaborated with senior developers and fixed testing feedbacks on a **KYC card generation** feature which has all the KYC related details of customers.
- Optimised existing reports and utilities with over **80%** performance improvement responsible for bulk record movement from one repositories to other for a better performance.
- Worked with KANBAN team on a ticketing tool to identify Issue and resolve them within **SLA**.
- Identified and fixed a production bug which was occurred due to a Custom Image attachment feature which use to fetch images from a DMS server, collaborated with Product team for a solution.
- Identified and fixed a bug of **Webhook** feature which is supposed to send CKYC numbers to an external API.
- Provided an improvement for a utility which bulk downloads record details basis **Mobile Number,CKYC number and DOB** and generates a response file of downloaded details and a reverse file if for any failure with appropriate failure reason.
- Actively participated and fixed file merging failure issues which is a standard feature which constantly reads and uploads data over CERSAI's SFTP.
- Re-engineered and optimized a custom Image attachment feature for a client which picks up images from a DMS server and attaches to the record based on some set of validations.
